

# BASQUE WASTE PREVENTION AND MANAGEMENT PLAN 2030

How do we make the **Circular Economy** a reality?

## CURRENT SITUATION

**6 million tonnes** of waste generated per year

**37%** of waste to landfill

**1.5 million tonnes** per year to landfill

Landfill sites in the Basque Country accumulate an amount of waste equivalent to 2 football pitches the size of San Mamés every year.

We need **A PLAN**

**3** MAIN CHALLENGES IN THE PLAN

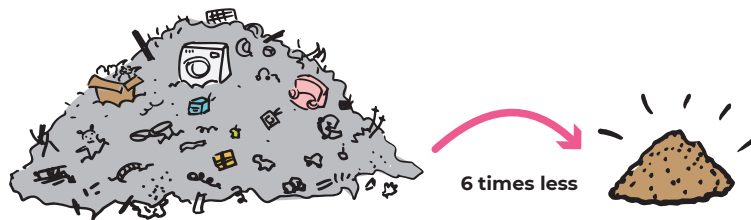

**3**

Aligning with new challenges and European legislation on waste

**2**

Minimising waste going to landfill

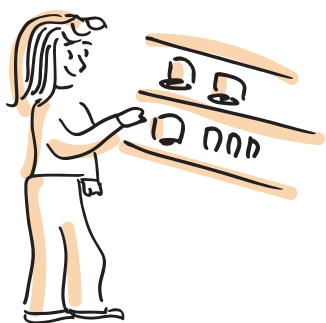

**1**

Generating less waste and exploiting its value by feeding it back into the economy

## WHAT CAN I DO?

**Think twice**

I will consume less and buy sustainably

**Make full use of things**

I will repair things that don't work and reuse as much as I can

**Separate waste**

I will use different containers to separate the waste

**Raise awareness**

I will try to raise the awareness of the people around me

## EXPECTED RESULTS BY 2030

**30%**

decrease in the waste generation rate / unit of GDP

**85%**

of waste separated at source

**85%**

of waste converted back into resources

Waste to landfill represents less than

**15%**
